

Flicker Application Update

1. Due to unavailability of card bus slot on the Panasonic CF-54 & FZ-55, the VI2 can be adapted for Flicker use.
2. In place of the dedicated cable and interface adapter shown in the red area below, please use the VI2 for the Flicker communication to the vehicle. All other components and software functionality remain the same.

Previous: Dedicated interface and cable

New: Vehicle interface (VI2)
